New York State HPV Vaccination Summit:

Solving the Puzzle of Boosting HPV Vaccination Rates

Thursday, April 4th, 2024, 9am - 12:45pm EST via Zoom

The HPV vaccine is a safe and effective method of protecting people against 6 different types of cancer, including cervical and throat cancers, yet it is woefully underutilized and administered late putting children and adults at future risk.

Join the NYS HPV Coalition at our first ever HPV Vaccination Summit to put the pieces together on how to increase HPV vaccination. There will be four sessions in total, with two breakout sessions: one for providers and the other focused on community outreach.

Topics will include:

- HPV-related cancer prevalence, burden, and prevention
- Evidence-based interventions to increase vaccination in health systems
- Strategies to reach communities with low rates of vaccination
- HPV-related policies and efforts at the state and national level
